To Whom It May Concern

It gives me immense pleasure in recommending Mohammad Sayeem Chowdhury for the master's program at your esteemed university. I have been acquainted with Sayeem for the past 4 years as one of my students at undergraduate level. I had the opportunity to experience his abilities in a great deal, and I believe he would do well if given the opportunity to continue his education.

It's always the quiet ones who fly under the radar, silently producing the best work and Sayeem is just one of them. I had taught him "Data Structure", where we deal with the elementary data abstraction concepts and we use C++ as the coding tool there. I have found him very keen to learn new concepts and he learns fast. He is curious and a kinetic learner in nature. I still remember him solving those additional problems without even saying a word. I was amazed to see his capability of applying data structures to real-life problems. He has a strong understanding of the complexity required of an algorithm. He is a person with commitment and I can't remember him missing any deadline. It is worth mentioning that I failed to deduct even a single mark of him on that course which includes him among the top 5% of the students through my career. Despite his strong problem-solving skill and amazing understanding of data abstraction, he ended up with a marginal CGPA through graduation, which was unclear to me. As I have inquired, I have come to learn that he had to go through several difficulties in his personal life. However, I do not believe that would make any difference to his core analytical ability to reach the highest level of success in life.

Sayeem is a hardworking person with a positive attitude and great patience. He talks less but I did not see that could affect his interpersonal skill at all. I have seen him several times to help his friends in their study, in the classroom and at the library as well. I found him inspiring his friends towards their individual improvement. My observation about him is, he believes in collective achievement as opposed to an individual. Being involved with organizing several events at the university, I found Sayem as an active participant in software contests as a contestant and volunteer as well. I can assure that Sayeem is a highly motivated person with a sense of obligation and with an impressive character. He is a man capable of dealing with any sort of consequences. I sincerely wish his admission to be granted, hopefully with financial aid and hoping for the best in his pursuits.

If you have any questions or need any further clarification about Sayeem, please feel free to email me at shovra.das@aiub.edu

Sincerely,

Shovra Das
Assistant Professor
Department of Computer Science
Faculty of Science & Information Technology
American International University-Bangladesh (AIUB)
